gitHub.com/Lord-ryuga

Tirupati , Andhra Pradesh

Skills

- **Programming & Automation**: Java, Selenium WebDriver, TestNG, Cucumber (BDD/Gherkin),Tosca, SDET (Software Development Engineer in Test), Regression Suite Automation.
- **API Testing**: REST (CRUD), SOAP (WSDL).PostMan, SoapUI.
- **DevOps & CI/CD**: Jenkins, Git, Maven, BitBucket.
- **Performance & Non-Functional**: Jmeter, Postman
- **Test Management:** Jira, qTest, Octane. Other: SQL, Linux scripting, Generative AI.

QUALITIES

- Problem-solving
- Analytical thinking
- Initiative Teamwork
- Leadership
- Attention to detail
- Adaptability
- Critical thinking
- Communication skills

About Me

SDET / QA Automation Engineer with 3 years of experience in designing and maintaining hybrid automation frameworks using Java, Selenium, TestNG, and Cucumber. Skilled in API testing with Postman and SoapUI, and experienced in CI/CD pipelines leveraging Jenkins, Git, and Maven. Proficient in performance testing with JMeter and well-versed in Agile/DevOps methodologies, ensuring seamless collaboration across teams. Adept at programmatically testing products, measuring test coverage, developing optimized automation, and driving testability and diagnostics. Strong background in designing and planning test conditions, test scripts, and test data sets to ensure comprehensive coverage and control, with domain expertise across mobile, web, and enterprise applications.

CERTIFICATION

- Certified Tester Foundation Level v4.0 from ISTBQ — JAN 2026
- Core Java for Android App Development — AUG 2025
- Software Testing With Selenium Web Driver — OCT 2025
- Gen AI for Prompt Engineering — NOV 2025
- Website Testing for Engineers — NOV 2025

WORK EXPERIENCE

Freelance Android Developer & QA Lead

Tirupati, India *2025 – present*

- Designed and planned test conditions, test scripts, and test data sets to ensure appropriate and adequate coverage and control.
- Delivered QA services for local businesses, focusing on billing systems and user interface validation
- Designed and executed functional, regression, and automation test cases using Selenium, JUnit, and Postman.
- Conducted UI/UX testing to improve usability and reduce customer complaints
- Applied boundary value analysis and equivalence partitioning to validate critical workflows
- Collaborated with small developer teams to ensure smooth deployment and release readiness
- Programmatically tested products, measuring test coverage, developing optimized automation frameworks, and driving testability and diagnostic improvements.

Exclusive Project List

Exclusive Project: Mew Browser

Mobile Browser App – Deployed on Google Play (Early access)

Role: QA Engineer & Developer

Key QA Insights & Contributions:

- Cross-Browser & Non-Functional Testing: Executed automated test suites using Selenium to validate rendering and performance across multiple browsers.
- Compatibility Testing: Verified app stability and functionality across all Android versions 8.0 and above, ensuring broad device coverage.
- UX/UI Validation: Conducted interface testing across different screen sizes and orientations, ensuring consistent user experience across all axes.
- Load & Stress Testing: Applied JMeter to simulate high-traffic scenarios, identifying bottlenecks and validating app resilience under peak loads.
- Release Readiness: Delivered detailed bug reports and collaborated with developers to ensure smooth deployment to Google Play.

ACHIEVEMENTS

- Enhanced regression suite automation with Cucumber & Gherkin, cutting manual testing hours significantly.
- Reduced manual testing hours by automating regression cases with Cucumber & Gherkin.
- Improved error detection by 40% with IUT testing in CSM & Billing modules.
- Published blockchain-based research project in Springer journal/book.

Language

- English (Fluent)
- Hindi (Fluent)
- Telugu (Mother Tongue)
- Tamil (Basic)

Exclusive Project: Pelika Assistant
General AI Assistant App – Deployed on Google Play (Early access)
Role: QA Engineer & Developer
Key QA Insights & Contributions:

- API Testing: Conducted manual and automated end-to-end API testing using Postman and SoapUI, ensuring robust request/response validation.
- Authentication Testing: Verified login, session management, and token handling with extreme care to prevent vulnerabilities.
- Performance Validation: Executed stress, load, and performance testing with JMeter, identifying bottlenecks and validating scalability under peak usage.
- Compatibility Testing: Ensured smooth functionality across multiple mobile devices and Android versions (8.0+).
- UX/UI Validation: Tested app interface across all orientations and screen sizes, guaranteeing consistent usability and accessibility.
- Prompt Validation: Initiated diverse prompts within the assistant to confirm valid and reasonable responses across scenarios.
- Read-Out Functionality: Validated visibility and functionality of text-to-speech features, including mid-session toggling of on/off states.

Software Test Engineer

Amdocs DVCI LLP | Pune, Maharashtra, India *2024 – 2025*

- Designed and executed manual & automated test cases, ensuring coverage across functional, integration, and structural changes.
- Enhanced hybrid automation frameworks (Java, Selenium, TestNG, Cucumber) improving test efficiency and reporting. Integrated CI/CD pipelines (Jenkins, Maven, Git, BitBucket) to accelerate automation and streamline delivery.
- Conducted root cause analysis and partnered with developers for rapid defect resolution, improving release quality.
- Performed non-functional testing (Performance Centre) to validate scalability, performance, and system reliability.
- Leveraging Generative AI to optimize test design & execution. Implemented regression suite automation as part of SDET responsibilities, reducing execution time by 50% and improving release cycle efficiency.
- Collaborated with Scrum teams and stakeholders, aligning QA activities with Agile and DevOps practices.

Test Associate Engineer

Amdocs DVCI LLP | Pune, Maharashtra, India *2022 – 2024*

- Automated user testing flows with Java, Cucumber, and Gherkin, enhancing reliability and reducing manual effort, while contributing to SDET responsibilities by developing reusable test scripts and scalable automation frameworks.
- Designed & executed test scenarios for new features (MTV, origination products, UI flows), enhancing scalability and performance validation.
- Conducted non-functional testing for scalability, portability, and security to optimize system performance.
- Performed functional testing (unit, sanity, regression, integration) ensuring product stability across workflows.
- Contributed to SDET activities by developing reusable test scripts and automation frameworks for Telecom applications Identified, reported, and tracked defects in Jira & qTest, publishing RCA reports to prevent recurrence.
- Supported CR demonstrations and stakeholder sign-offs, ensuring smooth feature delivery and defect resolution. Executed REST API CRUD and SOAP WSDL testing, validating service reliability and integrations.
- Conducted knowledge transfer sessions to strengthen team understanding of business processes.

EDUCATION

Bachelor of Technology in Computer Science **2018 – 2022**
SRM Institute of Science and Technology
